

NO LONGER!

You know that it is no longer acceptable to have

-  The best technology vendors offering proprietary solutions
-  Seamless infrastructure, if it cannot scale to meet tomorrow's requirements
-  Huge staff managing your network 24x7, if it means high investment and cost
-  High productivity at the cost of high duplication and inefficiency
-  Sophisticated technology solutions that don't deliver measurable business value

As a Multi-National Corporation, your operations are globally dispersed, complex and mission-critical. As you endeavor to conduct business seamlessly, across geographies and time zones, you realize your challenges are multi-fold:

The challenge of maintaining a complex and globally distributed infrastructure:

Your employees, partners and suppliers need to access your network from various destinations. While you realise the impracticality of retaining local support staff at every location, you are increasingly left with managing procurement and service agreements with various support organisations.

YOU NEED TO FREE UP YOUR RESOURCES

Go for a single point of contact - MNCs are increasingly demanding a single, global network to keep their infrastructure running. Planet One has a dedicated team of specialists strategically located across the Asia Pacific, and can offer you a single point of contact for all your regional and global networking needs. We can accept any level of responsibility for managing your distributed infrastructure through compliance with stringent Service Level Agreements carefully tailored to your business requirements

The challenge of ensuring a rarely compromised network with minimum investment in training and technology:

Your ever-expanding networks need high training and constant vigilance to prevent costly outages. An in-house 360 degree surveillance staff ensuring high uptime & safety of your network is a time and resource-consuming prospect for you to manage in-house.

YOU NEED TO FOCUS ON YOUR CORE BUSINESS

Go for a 24x7 Remote Management of your IT infrastructure - You can now benefit from the huge economies of scale by harnessing the resources of our strategically located 24x7 NOCs - known as the International Management & Resource Centre (IMaRC). At the IMaRC, we monitor and analyse all aspects of your IT infrastructure and security including servers, networked devices, databases and website through a certified team, efficient processes, best of breed tool integration, and latest technologies, at the lowest possible cost.

The challenge of balancing increasing travel and communications with mounting costs:

Long distance communication and travel have become inevitable to keep international businesses in the swing. Video-Conferencing has proved to be expensive and highly complex as an alternative.

YOU NEED COST-EFFECTIVE ALTERNATIVES

Go for a customized international communications infrastructure - Businesses are beginning to enjoy the benefits of desktop web-conferencing through internet / LAN access. Using technologies such as Voice Over Internet Protocol, Video Over Internet Protocol, and Virtual Private Networks, Planet One can design and manage a simple, cost-effective and versatile international communications architecture to reduce the cost of inter-office communications.

The challenge of ensuring enhanced productivity of your business travellers:

The workforce is becoming increasingly mobile. Employees need to access corporate information resources while on the move. Productivity on the road is a familiar challenge for most international travelers. The increasing pressures on time have made Anytime-Anywhere accessibility to more than just email applications, more critical than ever before.

YOU NEED TO ACHIEVE FASTER TIME TO BUSINESS

Go for business mobility solutions that are secure and cost effective - We can offer a variety of business mobility solutions, which give travelers secure, cost-effective corporate network access from any location with a telephone line or with a broadband or wireless connection to the Internet.

The challenge of accurately allocating cost to your various business units:

You need to assess and measure the profitability of your individual business units to enable you to plan your resources and take corrective measures. Arbitrary methods based on headcount or other metrics of convenience may lead to a distorted view of the actual scenario.

YOU NEED TO IDENTIFY YOUR HIGH COST AND LOW COST AREAS

Go for sophisticated technology for accurate cost allocation - We can track individual and departmental usage of shared resources such as telephone systems, network infrastructure, Internet bandwidth, and applications. Usage data is correlated with rate tables and other costs to provide accurate cost allocation by individual, department, or business unit.

And finally, the ever-persisting challenge of ensuring more for less:

You are constantly under pressure to deliver more. More bandwidth, more support, more applications, more uptime. Without more budgets!

YOU NEED SOUND TECHNOLOGY SOLUTIONS

Go for technology that delivers business value - The Planet One group of companies has a demonstrable track record for offering consistent quality and service with cost-effective, high output, scalable solutions within a rapid time-frame. Solutions that will ensure that your IT assets are delivering their maximum potential by eliminating the need for immediate capital investment.

PLANET ONE GROUP OF COMPANIES

A LIFE-CYCLE PARTNER - Given the complexity and variety of the above challenges, it is no longer enough to find individual specialists for individual jobs. The demand for a life-cycle partner is increasing everyday.

The Planet One group of synergistically related companies has emerged as a major end-to-end solutions provider in the region, capable of offering life cycle services. From architecting and building sound communications infrastructures, to managing them 24x7, we ensure that your IT assets are also aligned to your business needs. Because these are areas we specialize in. Areas we understand better.

A Formidable Solutions Group - By harnessing the support and resources of our related group companies - 3D Networks, Net ProActive Services and FCS Computer Systems - Planet One is uniquely positioned to provide a full range of multi-skilled, multi-platform, business critical solutions. The beauty is we are able to pass on the economies of scale on virtually every parameter to our customers.

Our ability to partner with the world's leading technology suppliers - **Nortel Networks, Symbol Technologies, Altitude Software, Witness Systems, Cisco Systems, Juniper, Melita and Verint** - gives us the flexibility to choose, customise and integrate the best technologies that deliver results.

With the support of more than 600 IT professionals, including 350 support engineers in nearly 30 locations across Asia, Planet One can address your technology challenges with a mature business perspective.

3D Networks, Net ProActive Services and FCS Computer Systems are Planet One Companies.
